

Designing Your AAA Sequence

Use this section to map AAA at both scales: the full experience and the next lesson.

Name of Experience / Module / Pipeline: **CS110 Week 3**

Stage 1: Application

7. What real thing will the learner touch, test, make, or play with immediately?

The learner will use VS Code to design their website. They'll utilize CSS for styling, HTML for structure, and JavaScript to integrate interactivity and page responsiveness. They will be able to see how their page responds to user controls and its appearance.

8. What productive friction do you want them to encounter here? What misconception should fail safely?

They will encounter friction while connecting JavaScript responsiveness to objects in the HTML file. A misconception to fail safely is that simple chunks of code won't suffice to complete complex journeys; they will encounter long lines of code instead.

Stage 2: Action

9. What are the 3-5 core concepts, definitions, or moves that should arrive only after Stage 1?

-
1. How finicky JavaScript is when interacting with HTML/CSS
 2. The importance of iteration and willingness to retry
 3. Creating a website through GitHub
-

10. How will the learner use those ideas to refine what they already began?

They'll return to their first script version and rewrite it using cleaner JavaScript and HTML/CSS refs, iterate the webpage design now that they have a more apt understanding of programming, and publish.

Stage 3: Amplification

11. What bigger frameworks, professional practices, or collaborative contexts will open here?

With these new findings, the learner will be adequately primed to learn UI/UX fundamentals, mentoring other computer science students through debugging, and ultimately leave with an improved morale and endurance for programming.

12. How does AAA work at the macro scale of the full experience and at the micro scale of one lesson or node?

At the macro scale, AAA offers learners a fail-safe space that gives them room for, even encouraging, mishaps. At the micro scale, it ensures that they get accustomed to spotting bugs, challenging past code versions, and working until regaining footing.
